

Dear Sir:

PLC or BPL will not only be detrimental to HF amateur radio communications in the U.S. but also render the HF frequencies up to 80 MHz allocated to the U.S. military and the F.A.A. virtually useless.

Japan has used PLC systems for some time now with peaceful co-existence between military and amateur enthusiasts by requiring that 30db notch filters be installed on all applications.

Thank you,

james R. Evans
